

The Fish Island Series - Starry Sky 2 Rooftop Tent

User Manual

Please read this user manual carefully before using the product.

Product Introduction

The Fish Island Series - Starry Sky 2 rooftop tent is a lightweight, compact, and easy-to-store portable multi-functional tent.

The main tent body adopts an inflatable air column design and comes with an air pump.

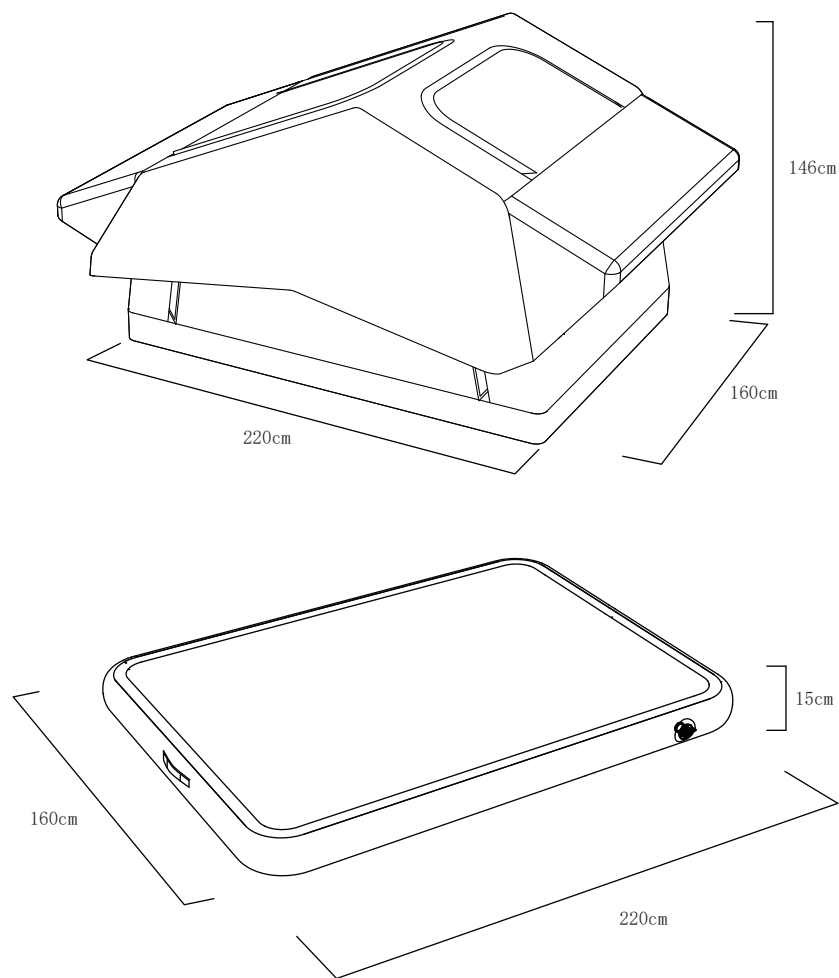

The tent has an attractive appearance, good wind resistance, and a spacious and comfortable interior.

It is safe, practical, and economical, serving as a family-friendly product that enhances outdoor bonding.

As rooftop tents become more popular and widely used, they will become an essential item for family travel.

Product Information

Packing Dimensions	54cm*42cm*86cm / 50cm*42cm*84cm
Net Weight	33.3kg
Gross Weight	36.3kg
Tent Fabric	200G untreated polyester-cotton fabric
Storage Bag Fabric	1000D Oxford cloth, waterproof index 3000+
Rainfly Fabric	300D Oxford cloth with black coating, waterproof index 3000+
Ladder	One-touch reinforced black ladder, extends up to 2.3m
Unfolded Size	220cm*160cm*146cm
Air Mattress Size	220cm*160cm*15cm
Air Column Diameter	11cm, PVC

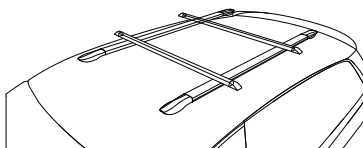

Parts List

Name	Quantity
Main Tent Body	1
Air Mattress	1
Ladder (Optional)	1
Air Pump (Optional)	1
Repair Kit	1
Shoe Bag	1
Ratchet Straps (Optional)	2
Instruction Manual	1
Storage Bag	1
Oars (Optional)	1
Side Tent (Optional)	1
Electric Air Pump (Optional)	1
Fixing Straps (160cm)	4

Installation Preparation

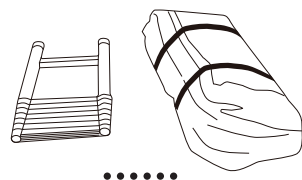

- 1 Before installing the Fish Island Series - Starry Sky 2 rooftop tent, the vehicle must be pre-installed with a roof rack that can bear at least 300kg.

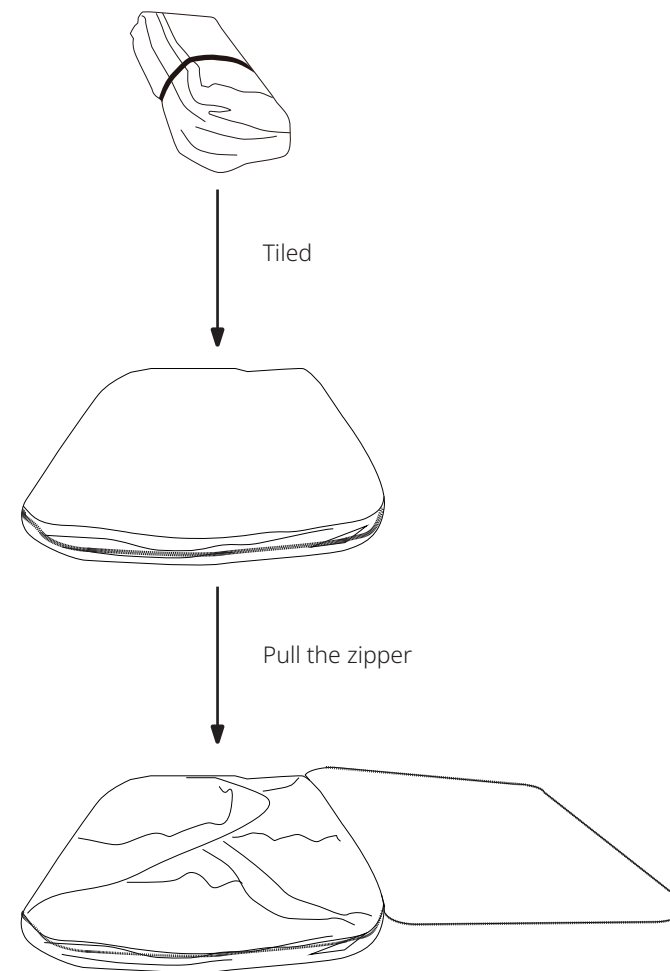

- 2 Open the storage bag.

- 3 Take out all accessories.

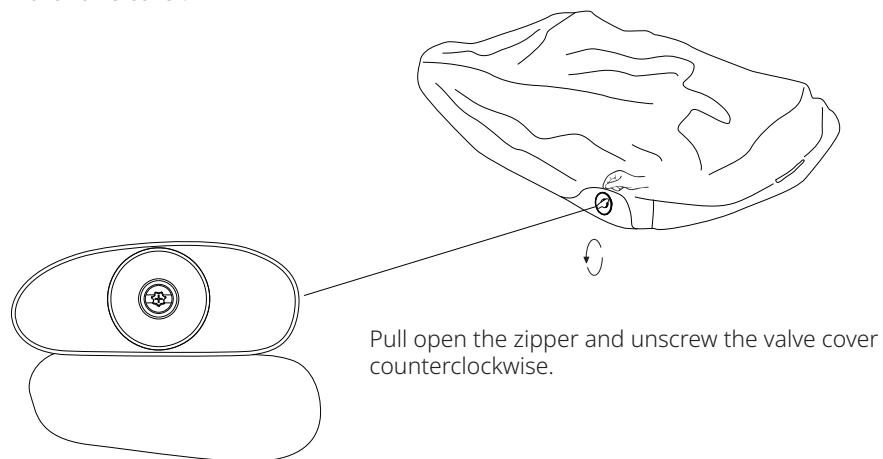

- 4 Unzip and unfold the tent. Lay the tent flat on the ground.

5 Air Mattress Inflation

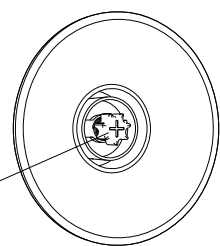

Find the air inlet valve on the side of the air mattress and open the valve cover.

Pull open the zipper and unscrew the valve cover counterclockwise.

Before inflation, please check if the column in the center of the air inlet is popped up and in the closed position. If it is not popped up, press and rotate it to make it pop up.

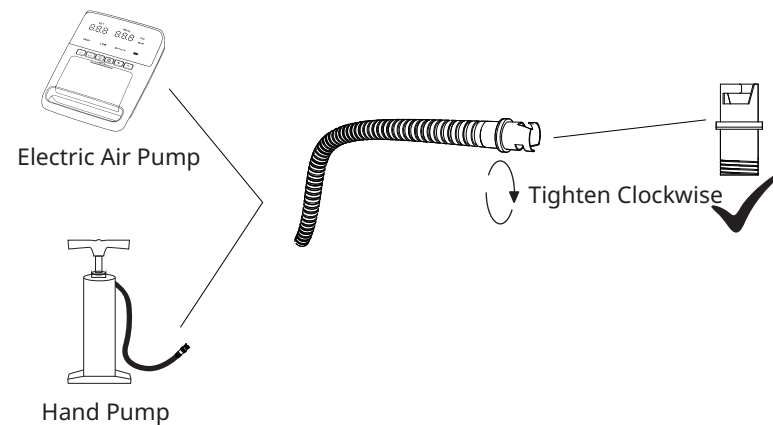

Inflated State

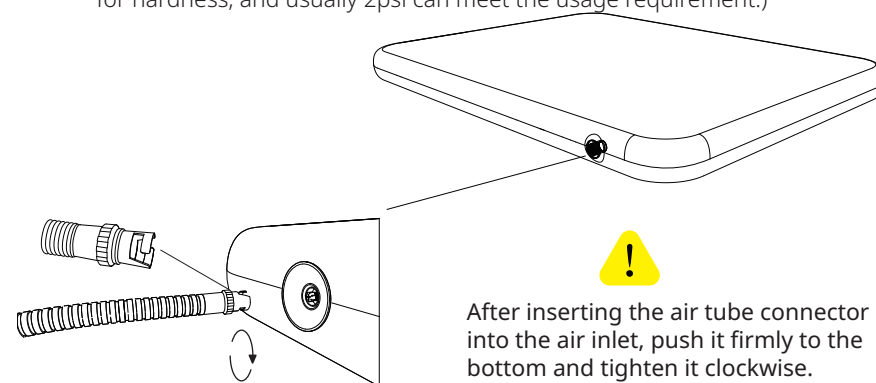

Deflated State

2. Install the connector matching the air inlet valve of the air mattress at the end of the air tube of the hand pump (electric air pump).

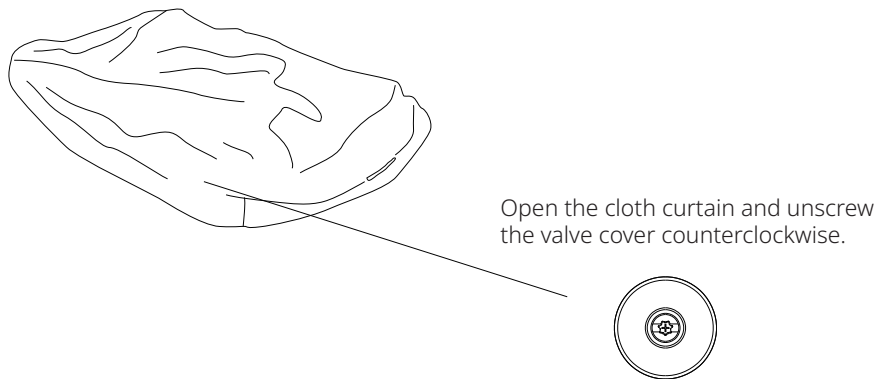

3. Connect the hand pump (electric air pump) to the air inlet valve and start inflating. When the pressure gauge of the hand pump (electric air pump) reaches 12psi and the air mattress is fully inflated, cover the valve cover. (If the tent is used on the ground, the air pressure can be adjusted according to personal preference for hardness, and usually 2psi can meet the usage requirement.)

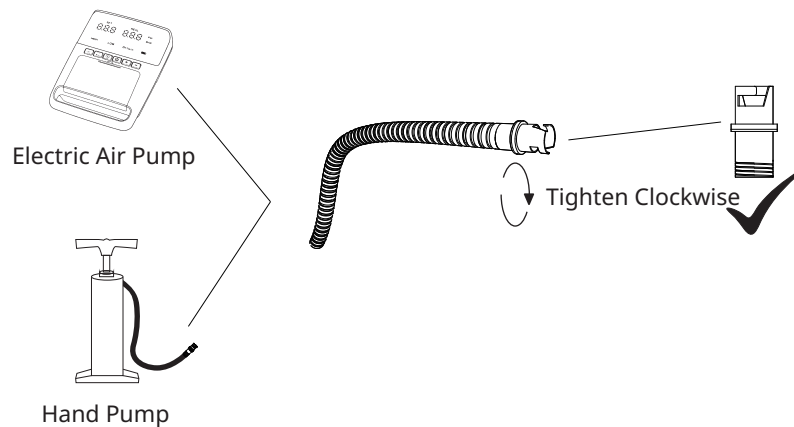

After inserting the air tube connector into the air inlet, push it firmly to the bottom and tighten it clockwise.

6 Air Column Inflation

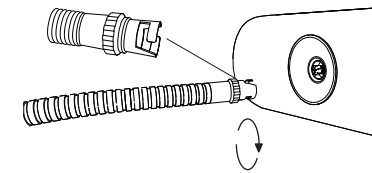

Find the air inlet valve of the air column and open the valve cover.

2. Install the connector matching the air inlet valve of the air column at the end of the air tube of the hand pump (electric air pump).
(The inflation connector and inflation method are the same as those for the air mattress inflation.)

3. Connect the air nozzle of the hand pump (electric air pump) to the air inlet valve and start inflating until the pointer of the pressure gauge of the hand pump (electric air pump) reaches 8psi to complete the inflation, and finally screw on the valve cover.

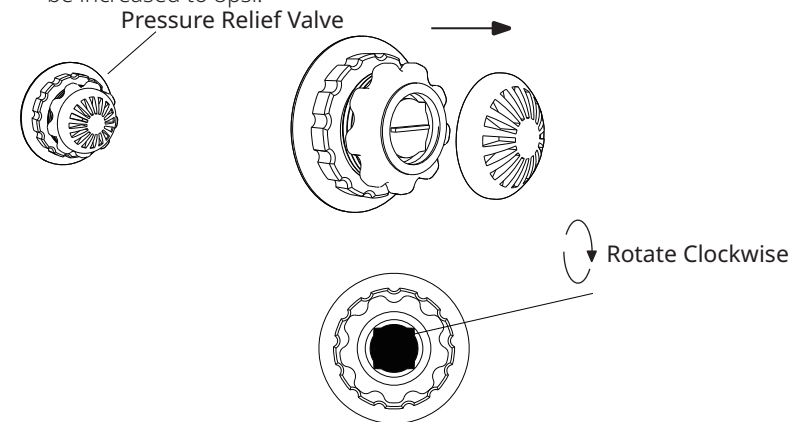

If the tent air columns cannot be propped up normally:

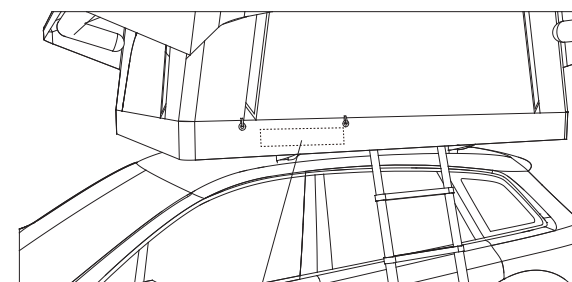

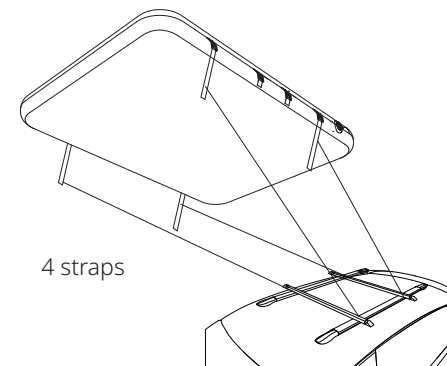

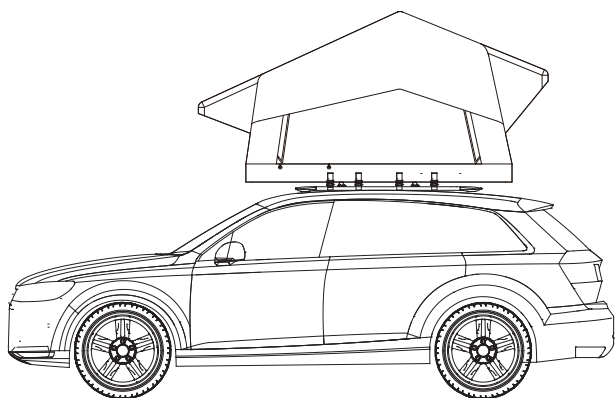

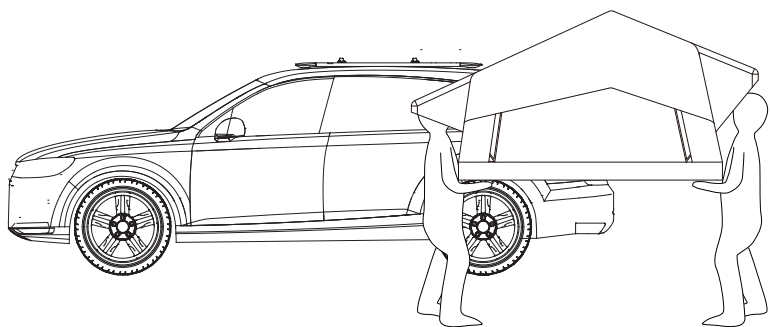

1. If the tent body is distorted or deformed in appearance, please stop inflating, check if the air columns are tangled or misaligned, rearrange the air columns, and then continue inflating.

2. When the air pressure of the air columns has not reached 8psi and the tent is not set up properly, but the red pressure relief valve on the air columns starts to release air. Please open the surface cover of the pressure relief valve and rotate the black knob inside clockwise until the pressure can be increased to 8psi.

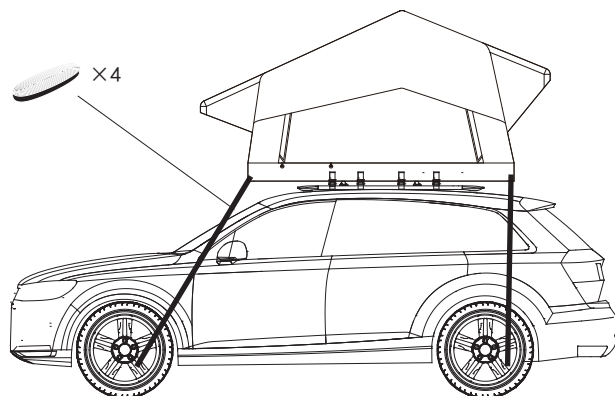

- 7 Place the fully inflated tent on the roof of the car and adjust its position, pull out the straps in the inner pocket of the tent's lower skirt, and fix the tent to the roof rack with 4 straps.

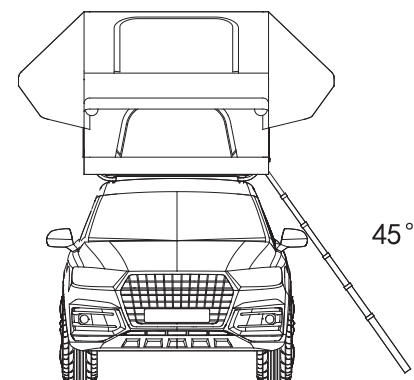

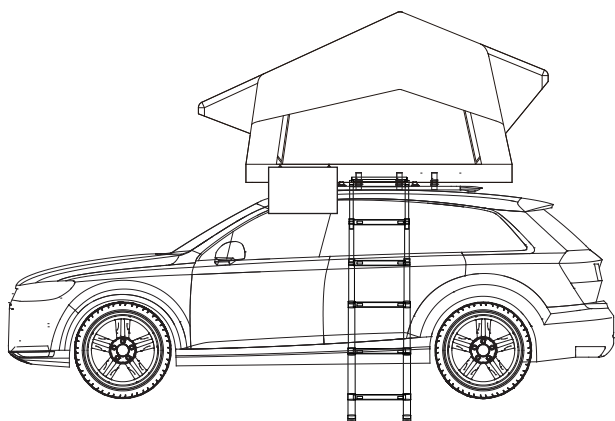

Fasten the tent to the roof rack with straps. If the straps are too long after being fixed, they can be placed in the inner mesh pocket (shown by the dotted line).

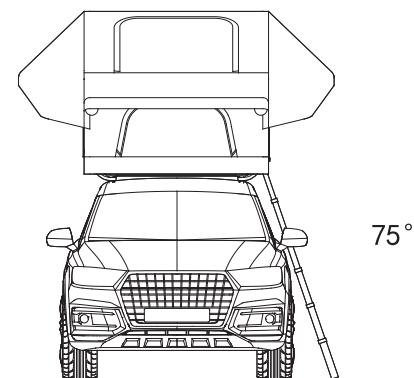

- 8 (This step is optional)
When the 4 straps on the air mattress are not used to fasten to the roof rack, or if you want to further enhance the stability of the roof tent, you can use the 4 long webbings in the accessories. Pass them through the D-rings at the four corners of the air mattress respectively and fasten them to the car wheel hubs.

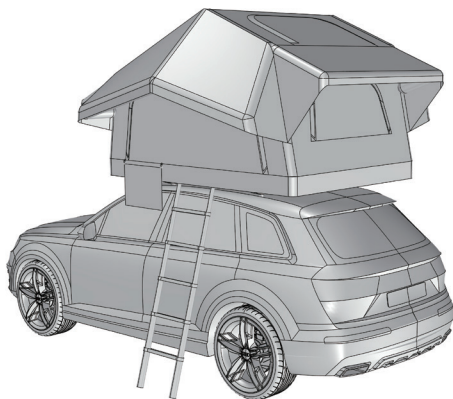

- 9 Secure the ladder with straps and install the shoe bag.

X

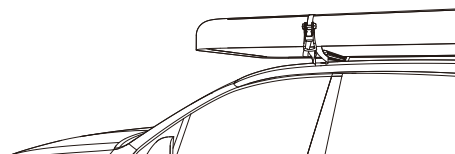

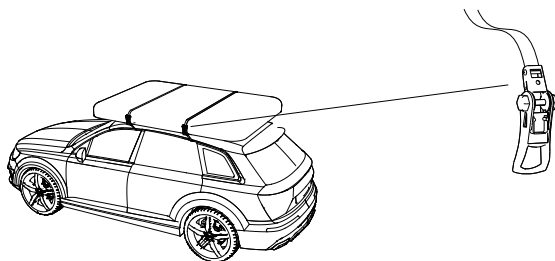

10 Complete installation

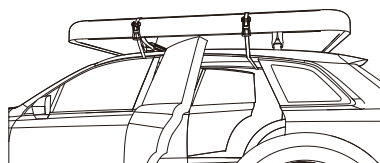

Safety Tips:

If you place an inflated air mattress on the roof of your car and drive, in addition to the normal fixing method in step 7, you must also use 2 ratchet straps to bind and reinforce it with the car body before you can drive on the road.

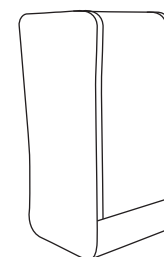

1.Pass the ratchet strap through the roof rack and fasten it firmly to the vehicle body

2.Ratchet straps pass through the interior of the vehicle and are firmly secured to the vehicle body

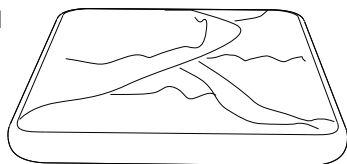

Storage Process

- 1 Unfasten the ladder straps and remove the ladder
- 2 Open the air valve of the tent's air column to deflate
- 3 Unfasten the fixing straps connected to the roof rack
- 4 Take down the tent
- 5 Tidy up the deflated tent
- 6 Open the air valve of the air mattress to deflate it
- 7 Fold neatly
- 8 Put into the storage bag

Folding method:

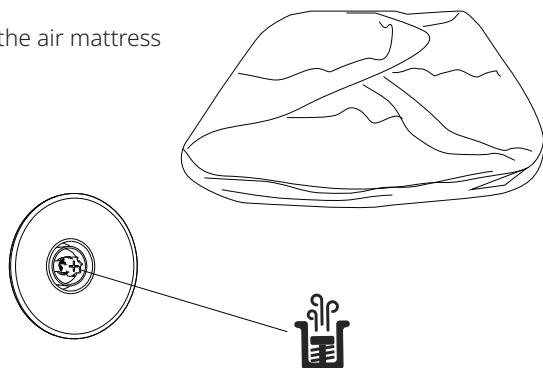

1. Arrange the tent neatly and put on the rain cover.

To facilitate subsequent folding, keep the air column inflation valves open when storing the air columns.

2. Deflate the air mattress

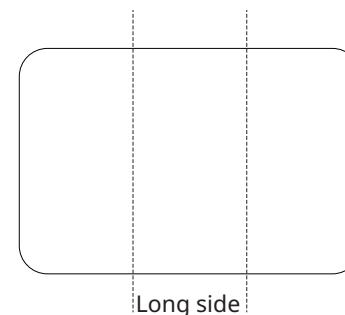

Deflated state

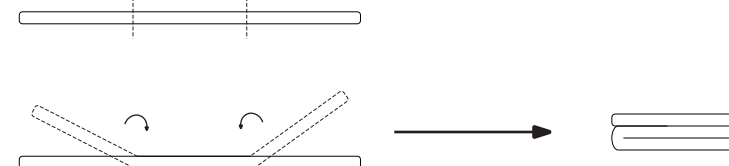

To facilitate subsequent folding, keep it in the deflated state and try to expel all air from the air mattress. You can use methods such as pressing, folding and pressing, or use the air pump to suck out the air. Failure to completely expel the air from the air mattress will affect the final storage volume, preventing it from returning to the factory state.

Short side

3. As shown in the diagram, fold twice along the long side

4. As shown in the diagram, fold twice again, then fix with 2 fixing straps to complete the folding.

Precautions

- 1.The roof must be pre-equipped with a roof rack that can bear a load of 300kg.
- 2.Do not enter the tent until it is fully set up.
- 3.Follow the guidelines to set up/store the tent.
- 4.After setting up the tent, fasten all installation parts firmly to ensure that the strap buckles are in a tight state to prevent falling.
- 5.Before going out, open the tent to check if its functions are intact and if all accessories are complete.
- 6.Choose an open and safe area for camping. Do not use the roof tent in thunderstorms or hurricanes.
- 7.It is forbidden to play around or jump inside the tent, and it is not advisable to sit concentratedly on the edge of the tent.
- 8.It is forbidden to use open flames, gas or other combustion appliances inside the tent.
- 9.It is forbidden to pierce the tent with sharp objects to avoid damage.
- 10.It is forbidden to sit or lie on the inflation pipes. Before use, check if the tent pipes are tangled. If any change in the position of the inflation pipes is found, adjust them to the normal position before inflating and using.
- 11.This product has been tested to be used normally at -20℃ to +40℃. If it is used beyond this temperature range, please be cautious. Any damage caused by this will not be covered under the warranty.
- 12.It is not recommended to use this roof tent in winds of force 6 or above.
- 13.To maintain continuous air circulation and avoid suffocation, keep the tent ventilated while sleeping. You must open the air vents or partially open the doors and windows on both sides of the tent.
- 14.The main tent fabric has no coating, so it has good air permeability. There will be no condensation inside the tent when the outdoor temperature is low, but its waterproof performance is relatively low, so it is not suitable for long-term use in rainy days. If used for a long time, the fabric will become wet.

Maintenance Guide

- 1.Keep flammable materials away from the tent.
2. Regularly check if all parts of the tent are in good condition.
3. Follow the warning labels on the interior to maintain the tent interior.
 4. After each use of the roof tent, ensure it is dry before storing to prevent mildew, staining, discoloration, fading, and degumming of the tent fabric and components.
5. If the roof tent is not used for a long time, store it in a dry, cool, and well-ventilated place.
 6. Do not overload the roof tent.
7. Use of Accessories
 - A. Ladder: Please follow the safety instructions on the label of the ladder when using it.
 - B. Air Pump: Pay attention to the correct usage method.

Warm Tips

This product is small in size, convenient for transportation and storage. During storage, store it safely and fix it properly. Climbing on it is prohibited to prevent tipping and injury. This roof tent can be matched with a suitable roof rack. This product can enter home elevators freely. This product can be used as an entertainment method in calm, safe shallow waters. When using it, please pay attention to water safety protection measures (life jackets must be worn). Keep the tent balanced when playing in the water, and do not exceed the load-bearing capacity of 300kg. (It can also be used as a fishing platform or a flood emergency life cushion.)

When camping in the wild, please protect the environment! For after-sales issues, you can call 400-058-0911 or contact Playdo distributors for solutions. We hope Playdo will bring you the warmth of home during your journey.
